To Whom It May Concern:
Prevagen is quackery and a scam. Their ingredient, the protein apoaequorin, gets digested into amino acids when taken orally. The company actually stated, "Apoaequorin is easily digested by pepsin" So there's no mechanism by which Prevagen can help memory function.[1] (The putative mechanism is that apoaequorin binds Ca++ in cell culture).

Quincy Bioscience claims Prevagen helps memory, but notes that the product is "not intended to... treat or prevent.. any disease."

You sold my patient Prevagen and as such are complicit in this fraud. Please refund their money, apologize for your actions, and reflect on how to be better.

Sincerely yours,
